

The PortworX® Real-Time DSD system is the most cost effective solution on the market for managing Direct Store Delivery (DSD) vendors.

Many retail businesses under perform due to lack of timely information to/from their SAP system; causing:

- Lost revenue due to out of stock products
- Long replenishment cycles
- Excess cost from incorrectly priced or excess inventory
- Impaired decision making for product strategy and customer management
- Delayed orders and missed deadlines
- Reconciliation issues on DSD vendor orders and invoices

PortworX® makes it affordable to solve the above problems by providing and updating critical information on a real time basis to **all** appropriate users throughout your operational environment – this includes employees, vendors and customers.

PortworX is designed to seamlessly track and manage the inventory management process, ensuring information necessary for accurate communication is provided **REAL TIME**, helping expedite the complete order, delivery to shelf and replenish cycle in a low cost fashion. PortworX is most affordable, because it does this **without paying additional SAP license fees**.

PortworX® has been designed to meet common retail store transaction needs with an architecture that also supports rapid development of customized user requirements. Examples of functions supported by PortworX® include:

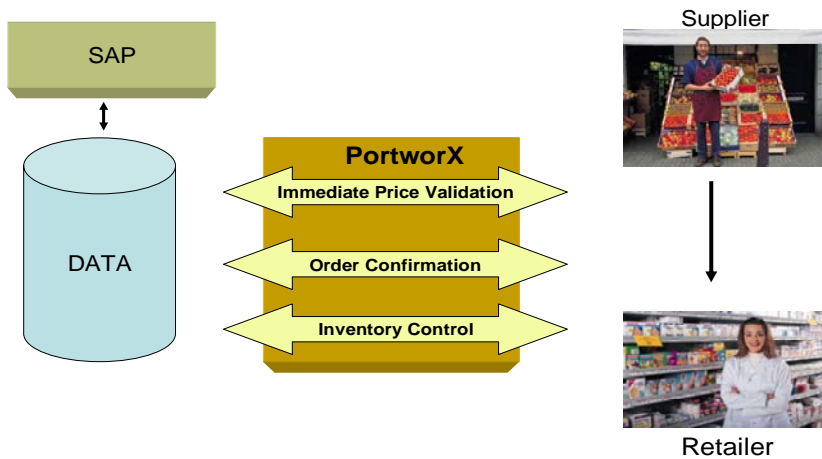

- Item and Price validation
- Inventory and ordering updates
- Product sales and shelf status
- Other functionality customized to your needs
